

Meta-Title: Are you searching for the best steel toe boots available? Check out this great selection today!

Best Steel Toe Boots for All Your Work Needs

Making the right decision what products to buy nowadays can be overwhelming. There are so many options on the market...some of them great, some of them just plain rubbish. Steel toe boots are no exception. But this is an area that making the wrong choice could have nasty consequences. When your work place demands that you wear steel toe boots to the site, it isn't an order that can be taken lightly.

That's why we have cut the bewilderment out of your search, and have narrowed it down to a selection of the top 5 best steel toe boots on the market, judging from quality materials and craftsmanship, durability, and strength. Unlike you, we've actually had the chance to try all 5 of these, plus others which didn't quite make it to par. So read on, and we'll tell you just **why** we chose these particular 5 to head our best boots list.

Our Boots Are Number #1 on Safety

Most peoples' first concern in [steel toe boots is safety](#). Steel caps on the boot ends protect the toes, the most vulnerable part of the foot. They're the most likely thing to get run over by a vehicle or a tractor, or stepped on by livestock (if you're on a farm), and such an accident could be severe. No pay check is worth a crushed foot.

That's why the first thing we test our boots for is strength. Can they do the job? Yes, each one of our boots will be the best protection you can get no matter where you work. That's because we've only selected footgear that meets the stringent standards of [health and safety regulations](#). Plus, we've taken a good look at the materials inside that make up the steel cap, and have proven that they're tough enough to stand up to immense weight and pressure while protecting your feet completely on the work site.

Here is an example of how steel toe boots could save your foot.

[The Banana Under the Forklift Test – Will the Steel Cap Work?](#)

Comfort is Important for Your Feet and Posture

You're going to be in these boots for hours each day. It's important that they are comfortable.

Each of the 5 products we've selected are:

- Voted by us as the most comfortable steel toe shoes we've worn yet
- Designed with great cushioning on the insides
- Made with tough materials so that they don't wear through and chafe
- Able to provide support for the heel and posture even after hours of wear each day
- Firm and comfy around the foot – not too tight and not too loose

Will Our Met Guard Boots Actually Last??

Yes!

It's a common problem nowadays that products wear out before they've even lost their brand-new out-of-the-box smell, so to speak. But the 5 best steel toe boots that we're listing here are all long-lasting winners. They don't part with you easily, and you'll be getting your money's worth out of them. Proof: one of the reviewers on our team actually is still wearing the same pair of boots literally *years later*, and that's with everyday usage! You couldn't say that about most brands!

Tread is a "Must-Have" in All Our Construction Boots

Deep tread shouldn't be a plus, it should be a "must-have". At least, that's what we think. I myself have personally slipped on ice once too often *not* to check out the tread in my boots, and I can personally guarantee that each of our 5 best construction boots has great grip. You'll be able to rely on these when it comes to ice, snow, or rain. Just like everything else on our met guard boots, the tread won't wear out either; my brother has a pair of one of these boots that is more than 7 years old, and the tread still leaves deep footprints in the dirt wherever he goes.

Solid Steel Toe Caps Are the Best

So check out the difference between authentic steel toe caps in met guard boots, and caps made of synthetic materials:

[Real Steel Versus Synthetic](#)

We are sure you will agree with us: the real thing definitely has some superiority over the composite caps!

Breathable Materials That Keep Your Feet Dry and Sweet-Smelling

It's a sign of good quality in a boot when your socks are still nice and dry at the end of the day. And it's something that we demanded from our 5 best steel toe boots. It didn't matter how humid the climate may be or how prone So-and-So is to stinky feet; we set our standards high and we weren't going to back down.

Who Can Benefit from Steel Toe Boots?

- Workers and supervisors on construction sites
- Electricians who are around open circuits a lot (see our electric hazard protection brands)
- Farmers working around heavy animals and equipment
- [Hikers](#) who will be trekking across sharp rocks and other foot-damaging terrain
- People who do a lot of outdoor work, such as chopping wood, using a chainsaw, etc.

Honest Product Reviews of our Chosen 5 Best Steel Toe Boots

We are customers just like you, so our reviews are sincere and candid. We'll give you specific reasons why we've chosen each one of our leading 5 met guard boots. We'll also truthfully tell you of situations where those particular boots would not be the best choice. We've learned that honesty is the best policy, and we're sure you'll agree when you read our selected pro's and con's.

Timberland PRO Men's Pitboss 6" Steel-Toe Boot

These met guard boots rank among our chosen 5 due to their superior quality and extra protective features:

- genuine leather materials
- real steel toe cap
- extra toe room with especially designed roomy toe box
- electrical hazard protection
- rubber outsole for grip
- sock liner to prevent blisters
- anti-microbial odor treated fabric
- designed with a contour shock diffusion plate in the soles to cushion the feet

How comfortable are these? Why, we can't even feel the steel!

These boots are the perfect choice for electricians, due to the [electrical hazard protection](#) that will keep you safe when dealing with open circuits. They are also a great choice for people who tend to experience discomfort with narrow toe room. The steel toe meets [ANSI standards](#) in terms of toughness and protection.

However, take note that these boots are *not* waterproof. You can make them temporarily waterproof by spraying with waterproofing oil, such as mink oil. It takes water a long time to seep in, so if your contact with water is brief, your feet should still remain warm and dry. Water will gradually discolor the authentic leather over time.

Timberland PRO Direct Attach 6" Steel Safety Toe Waterproof Insulated Boot

Timberland must know a thing or two about met guard boots, in order to turn out a second pair that scored tops with us! As well as the authentic steel toe cap and the electric hazard protection that the above boots have, this particular pair features some differences that we reckon make it a great buy:

- Waterproof protection
- Genuine leather treated for water, plus seam-sealed waterproof stitching
- 400 grams of insulation padding
- Nylon shock diffusion plate designed to keep you firm and in place
- Top collar is padded for extra comfort

These boots are an excellent pick for those who work outside in inclement weather regularly. They will keep your feet warm and dry all day long, whether you are in the rain, snow, or puddles. Also, if you are one of those persons who suffers from cold feet, then the

thick insulation makes these a Number #1 Choice! I personally fall into the latter category, frequently enduring chilblains as soon as the seasons tick over into winter, and these are my go-to footwear when the great outdoors starts freezing on me!

Seeing that these boots are obviously geared for the colder weather, it's a good thing that they come with superb tread and slip-resistant soles as well.

Some people on our team thought these looked a little chunkier and felt a little heavier than several other brands available (although I didn't notice anything), so if looks are important to you, maybe take a look at some of our other options.

Caterpillar Men's 2nd Shift 6" Steel Toe Boot

From a well-known brand that's been trusted on the construction site for years, it was no surprise to us that they produce some of the best met guard boots out there. Here are the points that really made the CAT brand score when it came to footwear:

- constructed with [Goodyear welt](#)
- Climasphere sock liner for comfortable, breathable all-day warmth
- Classic look with genuine brown leather
- Water resistant
- Slip resistant rubber soles with deep tread

For people who specifically want shoes built with the tried-and-true Goodyear welt construction, here they are. Based on the old-fashioned way of making shoes by hand, this construction method is lengthy and time-consuming, but produces a shoe sole that is unsurpassable in breathability and strength. The main thing in favor of this method is that the shoe can be re-soled again and again through-out its lifetime, meaning that you don't have to go out and rebuy a whole new pair just because the sole wore out after three or four years.

Mind, these particular shoes take a week or two to be broken in, so ease into them gradually before taking them on a 10 or 12 hr. shift, or you'll be suffering! Once they are broken in, they are very comfortable.

Caterpillar Men's Second Shift Steel Toe Work Boot

These particular boots not only fit cosily on the feet, but they look amazing too! Brown and tan colors are a great way to bring out the genuine leather feel. But of course, we would not rank our 5 best steel toe boot choices on aesthetics only!

- constructed with [Goodyear welt](#)
- rounded steel toe makes plenty of comfortable, non-chafing toe room
- water resistant
- outsole is oil resistant for optimum traction
- break in easily and quickly
- weigh less than some other options

These CAT boots are definitely a smart option if you're concerned about your construction boots being too heavy for comfort. They are also good for people working around oil, where the especially designed outsole will limit slips and help keep you on your feet, literally!

However, these particular med guard boots are not specifically made to ASNI standards, so if your workplace demands ASNI standard boots, these may not cut it. For your own yard work, farm work, hiking, backpacking, as well as if your construction site isn't nit-picky, these boots will do fine! There's a reason why the CAT brand has lasted on construction sites worldwide for decades!

KEEN Utility Men's Pittsburgh Steel Toe Work Boot

Comfort is put on the same level as safety in these super-comfy, nonchalant looking boots. The idea was to get a boot that did all the tough work, while still appearing and feeling casual. Here's what we came up with:

- Waterproof outer materials
- Well-fitting, supportive contoured heel
- Dry-Lex lining with advanced technology to keep shoe insides dry and breathable
- Slip resistant
- Scientifically researched for great foot and posture support

If you suffer from foot or back problems, then these may be the right ones for you. Several people on our team usually endure a lot of pain from lack of support from their shoes, but they were happy and smiling with these! Also, if you hate smelly, sweaty feet at the end of the day (or your family does!), then the Dry-Lex lining may be the answer to your problem. One of our team members gets really hot feet during the day, and he had to admit that with these med guard boots, he felt great!

We noted, however, that the traction on these isn't the best for snow and ice, so if you're looking for something to go winter hiking in, try one of our other brands instead.

To Sum It Up:

Take a quick look at our *Best Steel Toe Boots Product Chart* to help make your final decision:
